ABSTRACT:

PURPOSE: To provide a method of automatic layout for a signal delay control circuit, in which signal delay time can be adjusted without a change of cell arrangement after the completion of automatic wiring.

CONSTITUTION: Capacitor cell arrays 41-44 are arranged in wiring channel regions 31-34 between cell arrays 21-25. Before automatic layout, nets N1 and N2 liable to be affected by signal delay are specified, and an allowable delay time between the specified nets is determined. When automatic layout is performed, capacitor selection cells X1 and X2 having switch elements are arranged. The specified nets N1 and N2 are connected with capacitor cells Y1 and Y2 through the selection cells. The on-off states of the switch elements are fixed to satisfy the allowable differential time delay.
